

U-HACK @ GOLF

Handicaps are based only on scores in U-HACK outings! New players can use a USGA handicap for their first outing. They will play with a U-HACK handicap in their second outing. New players without a USGA handicap will be assigned an estimated handicap, but this estimated handicap will be subject to adjustment using the [Peoria System](#) in the player's first two tournaments. The adjustment will be made after the round if the player finishes 3 or more net under par. They will play with a U-HACK handicap in their third outing. Men will have a maximum handicap of 36 and women will have a maximum handicap of 48.

A player's average gross scores from their last 5 U-HACK outings, minus the high score, will determine their handicap. The total gross for the 4 scores is averaged and 72 is subtracted from the average to determine the U-HACK handicap. For players with only 4 U-HACK gross scores, the formula is the same as above except the average is based on their 3 lowest scores. For players with only 3 U-HACK gross scores, the highest gross score is not used. The two remaining gross scores are averaged and 72 is subtracted. For players with 2 U-HACK gross scores, the highest score is not used. The remaining gross score minus 72 is the player's handicap for their third U-HACK outing -OR- an equitable handicap can be assigned.
